

1 SYSTEM AND METHOD FOR DETECTING AND VERIFYING DIGITIZED
 CONTENT OVER A COMPUTER NETWORK

5 ABSTRACT OF THE DISCLOSURE

 A system for detecting digitized content and selecting matches from a master
verification database. The detection of digitized content is performed using a
verification database which contains a master table of contents identifiers and
10 songprints for corresponding digitized content. A network server is programmed to
receive selections of a table of contents identifiers from computers, and to request
selections of songprint identifiers from the computers and selects matches from the
master verification database.
